

GUIDELINES FOR TEMPORARY SPIRE SITE CLOSURE

Please follow these instructions as part of a temporary closure of up to 8 weeks. This advice is based on British Soft Drinks Association (BSDA) guidelines. It is important that you follow each step of the guide to uphold the quality of the product served to your guests. Cleaning the equipment at the start of the temporary shut down and again before reopening for business is a vital part of the process, in conjunction with maintaining your own personal hygiene. Prior to commencing any cleaning please ensure you have washed your hands correctly for a minimum of 20 seconds, as recommended by the current Government guidelines.

If you anticipate a **closure in excess of 8 weeks** Britvic will supply further supporting material on how you can restart your postmix equipment. We believe this will take an average of 90 minutes (after the cooler has built an ice bank), depending on the system set up (number of dispense points and products etc). Please follow the same shut down steps below (points 1-5) but **ensure that the postmix cooler is switched OFF** (point 1) at the power socket in this scenario.

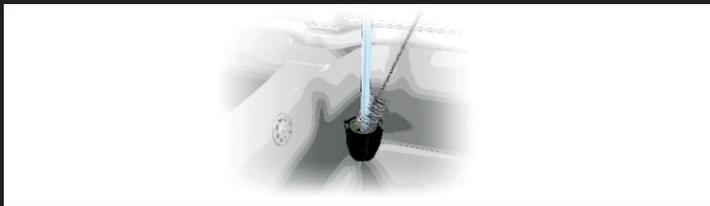

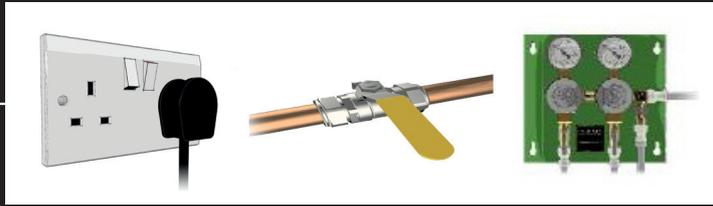

For further support please visit
www.britvicequipment.com

SHUT DOWN PROCESS

1

Leave mains power ON (first 8 weeks after shut down) but turn CO2 and the water supply OFF.

2

Remove the nozzle, clean and dry thoroughly. Refer to hygiene poster/guide book for full details.

3

Clean the nozzle base, then refit the nozzle.

**DO NOT
LEAVE IN SOAK**

4

Flush the drip tray with clean water.

5

The system can be left in this clean state for up to 8 weeks. The Spire unit can be turned off using the power switch on the electrical box.

RESTARTING THE SYSTEM

If less than 8 weeks shut down please follow these steps

1

Remove and replace any Out of Date Bag in Box (BiB).

2

Turn on CO2 and water. Turn power to the carbonator (or Cooler Carbonator) Off and then back On to reset.

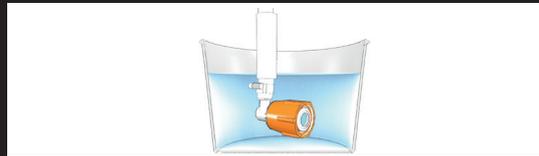

3

Remove and clean the nozzle and nozzle base before refitting to the Spire.

4

Clean any connector before attaching to the new BiB in the usual way. Refer to hygiene poster/ guide book if necessary.

5

Dispense at least 3.5 litres of carbonated water. If a dedicated button is not available, remove a BiB and use that flavour button to dispense the carbonated water.

6

If still products are available (Robinsons, Lipton) repeat the above step for the still water.

7

Pour a finished drink, check the temperature (below 4.4 degrees C) and resume service. A temperature indicator is available in the Britvic Thirst Aid Kit.
